

# ENDURANCE MERCURY XBP PUMP ACHIEVES OVER 3X RUN-LIFE IMPROVEMENT

Endurance Lift Solutions leverages a range of specialized knowledge and equipment to offer customized solutions for your specific well conditions.

## CHALLENGE

A large operator in California was experiencing short run times in a challenging application - including the need to set the pump at ~90 degrees and produce a large amount of sand. **The four previous standard-API rod pumps installed in the well averaged only 152 days prior to failure.**

## SOLUTION

Endurance introduced their exclusive modified-API **Mercury XBP Pump** (barrel length plunger tubing pump) to address these issues.

## RESULTS

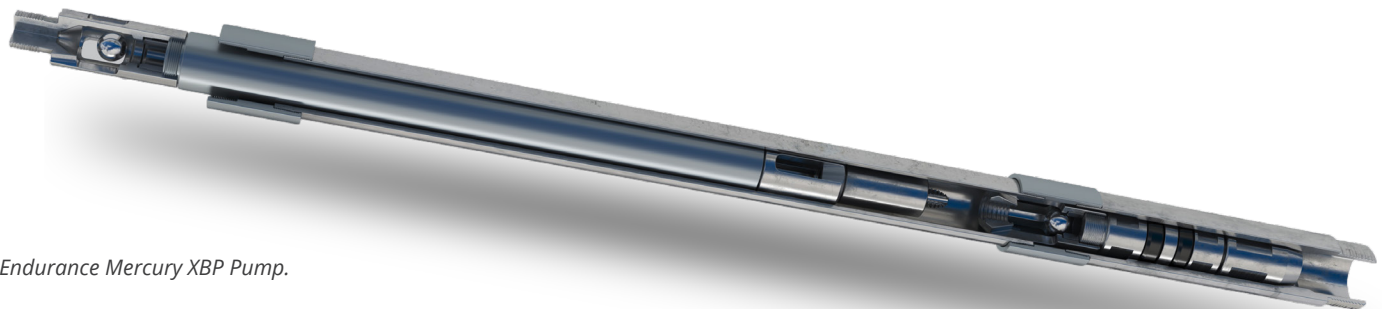

The **Endurance Mercury Pump XBP** was installed on 10/21/202 and ran for 466 days before being pulled. **The pump showed only minor wear and achieved an increase in run days of over 3X.**

### PROJECT DESCRIPTION

Location  
Coalinga, CA

Customer:	Large Independent
Lift Type:	Rod Lift
Pump Set Depth:	2,592'
Production:	190 bpd (96% water cut)
Inclination:	85 degrees
Standard-API Avg Run:	152 days
Mercury XBP Run:	466 days
Improvement:	3X

Endurance Mercury XBP Pump.
