

ENDURANCE

Sand Pusher Pump

MODIFIED-API ROD PUMP

Your unique well conditions may demand a more innovative and cost-efficient solution than standard API sucker rod pumps can deliver. For those applications, Endurance customizes pump solutions leveraging a range of specialized knowledge and equipment.

ENDURANCE SAND PUSHER ROD PUMP

The Endurance Sand Pusher Pump, unlike typical pumping systems, is designed to move foreign material that would otherwise disable conventional pumps, including frac sand, formation sand and iron sulfide.

- High-Flow cages
- Precision grooved or pressure actuated ring plunger
- Sand pattern - .070 clearance balls and seats
- Upper slim line 2 stage check assembly
- Multiple bottom discharge valves to allow plunger to push solids out of pump
- Recommend using a stainless blast sub in discharge area

SUMMARY OF ADVANTAGES

- Handles frac and formation sand better to prolong pump life
- Reduced electrical usage
- Reduced rod string fatigue
- Flexibility to match production needs
